<p>(54) Title: A COMMUNICATION SYSTEM ARCHITECTURE</p>																																																												
<p>(57) Abstract</p> <p>Telephone calls, data and other multimedia information is routed through a hybrid network which includes transfer of information across the internet. A media order entry captures complete user profile information for a user. This profile information is utilized by the system throughout the media experience for routing, billing, monitoring, reporting and other media control functions. Users can manage more aspects of a network than previously possible, and control network activities from a central site.</p>
